Work Experience

QA Engineer

"Impostar service" - Chishinau

October 2017 to Present

Participation in the development of test plans. Development and execution of test cases. Analysis of the results of the work done and the correction / improvement of test plans and test cases. Security control of implemented solutions. Research testing to check for the absence of scenarios for projects contrary to business logic. Working with user reports - identifying the true errors, the root of the problem, screening out problems that are not related to our product, issuing recommendations to avoid / eliminate problems by the user. Checking the purity of users (for lack of use of vulnerabilities / incorrect logic of the product).

QA Engineer

"Suppunion" - Tiraspol

September 2013 to October 2017

Participation in the development of test plans. Development and execution of test cases. Analysis of the results of the work done and the correction / improvement of test plans and test cases. Security control of implemented solutions. Research testing to check for the absence of scenarios for projects contrary to business logic. Working with user reports - identifying the true errors, the root of the problem, screening out problems that are not related to our product, issuing recommendations to avoid / eliminate problems by the user. Checking the purity of users (for lack of use of vulnerabilities / incorrect logic of the product).
